Flutter · Bloc · Cubit · bloc_test

Learn Bloc the way real Flutter teams use it

A live crash course over one weekend. Go from "I've heard of Bloc" to building a complete shopping cart feature with Cubit, Bloc, a repository and tests.

2 live sessions | One weekend | Code along | Full source code

```dart
class CartCubit extends Cubit<CartState> {
  CartCubit(this._repo) : super(const CartState());
  final CartRepository _repo;

  Future<void> add(Product p) async {
    emit(state.copyWith(saving: true));
    await _repo.add(p);
    emit(state.copyWith(items: [...state.items, p]));
  }
}
```

2
live sessions over one weekend

~5 hrs
hands-on, instructor-led

1
cart feature you build yourself

Tests
written with bloc_test

WHY THIS COURSE

Tutorials show Bloc. This course makes you use it.

Most people learn Bloc from a counter example and then get stuck in a real app. In this course you write every line of a real feature, live, with a working engineer explaining why each piece is shaped the way it is. You leave able to use Bloc at work and explain it in interviews.

Learning alone from tutorials	This course
✕ Counter examples that don't scale	✓ A real cart feature, end to end
✕ Business logic mixed into widgets	✓ Logic in Blocs, data in repositories
✕ No idea how to test a Bloc	✓ Tests with bloc_test and mocktail
✕ Unsure when to pick Cubit or Bloc	✓ Clear rules for Cubit vs Bloc

WHO IT'S FOR

✓ **You've learned Flutter basics**
You can build screens with widgets and setState, and want to structure a real app.

✓ **You're preparing for jobs**
Bloc shows up in many Flutter job posts and interviews. Learn it properly, with tests.

✓ **You use Provider or setState at work**
Your team is moving to Bloc, or you want to know when it's worth it.

✓ **You finished Flutter in 10 Days**
This is the natural next step after your first app.

WHAT YOU TAKE HOME

01
Your feature
A product list and cart built with Bloc.

02
Tests
Bloc tests you can run without a phone.

03
Source code
Everything we build, shared on GitHub.

04
Interview answers
Common Bloc questions, answered.

SYLLABUS

Two sessions, one project

Both sessions build on the same app, so every topic has a reason. Each session is about 2.5 hours, mostly live coding.

01 Bloc foundations

Weekend · Day 1 · ~2.5 hrs

TOPICS COVERED

1. Why state management: where setState breaks down in real apps
2. Cubit first: states, emit, BlocProvider and BlocBuilder
3. Bloc with events, and when to choose Bloc over Cubit
4. BlocListener and BlocConsumer for navigation, snackbars and dialogs
5. Immutable states with Equatable and copyWith

HANDS-ON LAB

Build a login screen with validation, loading and error states.

OUTCOME

You can manage a screen's state with Cubit and Bloc.

02 Bloc in a real app

Weekend · Day 2 · ~2.5 hrs

TOPICS COVERED

1. The repository pattern: keep API calls out of your Bloc
2. A product list from a REST API with loading, empty and error states
3. A cart shared across screens with MultiBlocProvider
4. Testing Blocs with bloc_test and mocktail
5. A folder structure that scales, and common Bloc interview questions
6. Bloc with AI: review an AI-written Bloc, spot what it gets wrong and fix it

HANDS-ON LAB

Build the product list and cart, add tests, push to your GitHub.

OUTCOME

A tested, working cart feature you can show and explain.

TOOLS & PACKAGES

`Flutter` `Dart` `flutter_bloc` `equatable` `bloc_test` `mocktail` `http` `Git`

YOUR MENTOR

Kishan Kumar Sharma

Senior Software Engineer at Relevance Lab · MCA

Flutter developer for 5+ years. Builds production apps with Bloc, go_router and clean architecture, and has worked on large consumer apps as part of a team. Founder of Widgetry Academy.

PROGRAM DETAILS

COURSE	Bloc State Management Crash Course
DURATION	2 live sessions, about 5 hours, over one weekend
SCHEDULE	Weekend batch. Dates are on the course page
LEVEL	Intermediate. For people who know Flutter basics
PREREQUISITES	Widgets, StatefulWidget and setState, and basic Dart async (Future, async/await)
FORMAT	Live online, code along, questions answered in class
YOU'LL NEED	A laptop with Flutter installed, VS Code or Android Studio, and a GitHub account
FEE	₹999 · early bird ₹799 for the first 15 seats
REFUNDS	Full refund if you cancel before the first session

QUESTIONS

Frequently asked

Do I need to know Bloc already?

No. We start Bloc from zero. You only need Flutter basics: widgets, setState and a little Dart async.

How do I join the sessions?

Sessions are live online. After you pay, the joining link appears on the course page (sign in with the same account), and we share the details on WhatsApp too.

Is this for complete beginners?

No. If you're new to Flutter, start with Flutter in 10 Days first.

Will I get the code?

Yes. The full source code of everything we build is shared on GitHub after the course.

Can I get a refund?

Yes, a full refund if you cancel before the first session starts. If we cancel or move the batch, you get a full refund or a seat in the next batch. See widgetryacademy.in/refund.html.

Can't AI just write my Bloc code?

It can write a first draft, and we use it in class. You learn the patterns well enough to review AI-written Bloc code, catch its mistakes and fix them.

SEATS ARE LIMITED PER BATCH

Reserve your seat

1. Scan the QR code or open the link below
2. Sign in and fill in your details
3. Pay securely online. Joining details come on WhatsApp
