Widgetry Academy

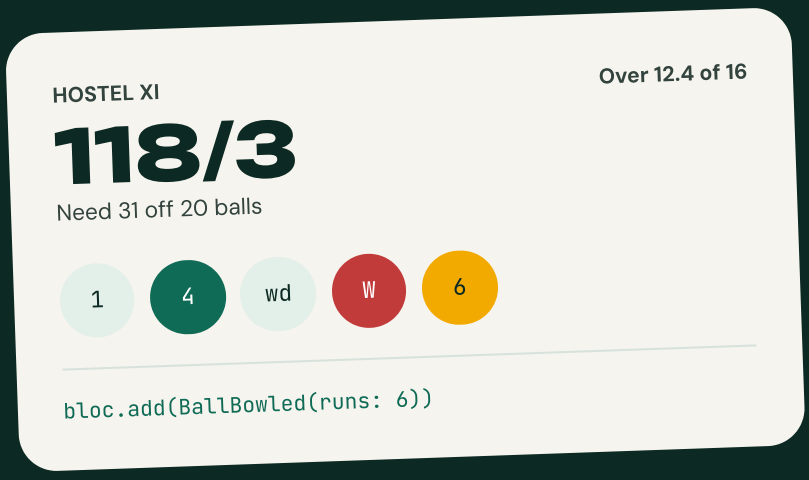

LEARN · BUILD · SHIP

Dart OOP · Clean architecture · Bloc · Testing

Learn clean Flutter by building a cricket scorer

Six live sessions over three weekends. Learn OOP, clean architecture, Bloc and testing on one real app: score a gully match ball by ball, with extras, wickets, strike changes, undo and a full scorecard.

6 live sessions · 3 weekends · Code along · Full source code

6
live sessions over 3 weekends

~15 hrs
hands-on, instructor-led

1
cricket scorer app you build and use

Tests
for every cricket rule

WHY THIS COURSE

Weather apps hide architecture. A cricket match needs it.

Most architecture courses build a weather app: fetch data, show it. The layers feel like extra work. A cricket match is full of rules, and rules are exactly what OOP, clean architecture and Bloc are for. Every ball is an event, every kind of ball behaves differently, and every rule can be tested.

Learning alone from tutorials	This course
✕ Layers that feel like boilerplate	✓ Layers that solve real problems
✕ OOP learned from animal examples	✓ Polymorphism with wides and no-balls
✕ Bloc memorised, not understood	✓ Every ball is a Bloc event
✕ Apps nobody uses after the course	✓ An app you use in your own matches

WHO IT'S FOR

✓ **Your code works, but it's messy**
Everything lives in one widget, and changing one thing breaks another.

✓ **You're preparing for jobs**
Clean architecture, Bloc and testing come up in Flutter interviews again and again.

✓ **You did the Bloc crash course**
This goes much further: OOP, architecture, saving data and testing a whole app.

✓ **You love cricket**
You only need the basics of the game. We keep the rules simple.

WHAT YOU TAKE HOME

01
Your app
A cricket scorer you can install and use.

02
Tests
Unit and Bloc tests for the rules.

03
Source code
Shared on GitHub, with checkpoints per session.

04
Interview story
How to explain your architecture.

SYLLABUS

Six sessions, one app

Two sessions each weekend. Every topic goes straight into the cricket scorer, so the theory always has a reason. Each session is about 2.5 hours.

#	TITLE	WHEN	OUTCOME
01	**Dart OOP through the game**	Weekend 1 · Session 1 · ~2.5 hrs	The core models of the app, with a clean API.
02	**Polymorphism and the rules of cricket**	Weekend 1 · Session 2 · ~2.5 hrs	A scoring engine you can trust, proven by tests.
03	**Clean architecture**	Weekend 2 · Session 3 · ~2.5 hrs	Matches that survive closing the app.
04	**Bloc in depth**	Weekend 2 · Session 4 · ~2.5 hrs	Score a real match ball by ball.
05	**Scorecard and history**	Weekend 3 · Session 5 · ~2.5 hrs	A scorecard your friends will actually see.
06	**Ship it and explain it**	Weekend 3 · Session 6 · ~2.5 hrs	A finished, tested app on your GitHub.

TOOLS & PACKAGES

`Flutter` `Dart 3` `flutter_bloc` `get_it` `equatable` `bloc_test` `mocktail` `Local storage` `Git`

01 Dart OOP through the game

Weekend 1 · Session 1 · ~2.5 hrs

TOPICS COVERED

1. Classes, constructors and encapsulation: Match, Innings, Over, Player
2. Why the score can't be edited directly
3. Immutable objects, copyWith and value equality
4. Composition over inheritance, and why

HANDS-ON LAB

Model a match and an innings in pure Dart.

OUTCOME

The core models of the app, with a clean API.

02 Polymorphism and the rules of cricket

Weekend 1 · Session 2 · ~2.5 hrs

TOPICS COVERED

1. Abstract and sealed classes: legal ball, wide, no-ball, wicket
2. Pattern matching with Dart 3 switch
3. Strike changes, end of over and all out, written test-first
4. The SOLID principles with examples from the app

HANDS-ON LAB

Build the scoring engine and its unit tests.

OUTCOME

A scoring engine you can trust, proven by tests.

03 Clean architecture

Weekend 2 · Session 3 · ~2.5 hrs

TOPICS COVERED

1. Presentation, domain and data layers, and the dependency rule
2. Use cases: StartMatch, RecordBall, UndoLastBall
3. Repository interfaces, and saving matches on the phone
4. Dependency injection with get_it

HANDS-ON LAB

Wire the engine into layers and save matches locally.

OUTCOME

Matches that survive closing the app.

04 Bloc in depth

Weekend 2 · Session 4 · ~2.5 hrs

TOPICS COVERED

1. A match Bloc where every ball is an event
2. Undo by replaying events
3. BlocListener for wicket and end-of-over dialogs
4. Cubit vs Bloc, and when to use which

HANDS-ON LAB

Build the live scoring screen.

OUTCOME

Score a real match ball by ball.

05 Scorecard and history

Weekend 3 · Session 5 · ~2.5 hrs

TOPICS COVERED

1. Batting and bowling scorecards from the same data
2. Match history and a result summary
3. Sharing the scorecard as an image
4. Testing Blocs with bloc_test and mocktail

HANDS-ON LAB

Build the scorecard and share it on WhatsApp.

OUTCOME

A scorecard your friends will actually see.

06 Ship it and explain it

Weekend 3 · Session 6 · ~2.5 hrs

TOPICS COVERED

1. A release APK you can install on any phone
2. A README with screenshots that recruiters will read
3. How to explain your architecture in an interview
4. Code review practice: check an AI-written feature against the architecture and fix it
5. Open Q&A on your own projects

HANDS-ON LAB

Release build, README and a practice interview answer.

OUTCOME

A finished, tested app on your GitHub.

YOUR MENTOR

Kishan Kumar Sharma

Senior Software Engineer at Relevance Lab · MCA

Flutter developer for 5+ years. Builds production apps with Bloc, go_router and clean architecture, and has worked on large consumer apps as part of a team. Founder of Widgetry Academy.

PROGRAM DETAILS

COURSE	Flutter, Bloc & Clean Architecture: Build a Cricket Scorer
DURATION	6 live sessions, about 15 hours, over 3 weekends
SCHEDULE	Two sessions each weekend. Dates are on the course page
LEVEL	Intermediate. For people who know Flutter basics
PREREQUISITES	Widgets, StatefulWidget and setState, and basic Dart. OOP is taught from the start
FORMAT	Live online, code along, questions answered in class
YOU'LL NEED	A laptop with Flutter installed, VS Code or Android Studio, and a GitHub account
FEE	₹2,999 · early bird ₹2,499 for the first 10 seats
REFUNDS	Full refund if you cancel before the first session

QUESTIONS

Frequently asked

Do I need to know Bloc or clean architecture?

No. We start both from zero. You need Flutter basics and a little Dart.

Will I get the code?

Yes, on GitHub, with a checkpoint for the start and end of every session.

How do I join the sessions?

Sessions are live online. After you pay, the joining link appears on the course page (sign in with the same account), and we share the details on WhatsApp too.

Do I need to know cricket rules?

Only the basics: runs, overs, wides, no-balls and wickets. We go through every rule we use.

Why learn architecture when AI can write code?

AI writes code, not structure. In the last session you review an AI-written feature against what you've learned and fix it, like a real code review.

Can I get a refund?

Yes, a full refund if you cancel before the first session starts. If we cancel or move the batch, you get a full refund or a seat in the next batch. See widgetryacademy.in/refund.html.

SEATS ARE LIMITED PER BATCH

Reserve your seat

1. Scan the QR code or open the link below
2. Sign in and fill in your details
3. Pay securely online. Joining details come on WhatsApp
